SUMMARY

Senior product designer with 5+ years of experience designing complex, human-centered products. I design AI products people can trust: agents that show their work, flag when they're unsure, and fit into real workflows. I prototype in code, and I bring a background in professional music and HCI research.

EXPERIENCE

Independent design and AI projects

2024 to present

- Designed and built AI study tools in code, including a Turkish voice transcriber that turns recorded speech into interactive reports with transcription, translation and audio playback.
- Designed and built music practice tools: a shared setlist practice app for an ensemble and a 53-tone makam keyboard for ear training.
- Completed MIT Professional Education: Applied Generative AI for Digital Transformation (2024).

Professional musician

2024 to present

- Founder and leader, Balkan brass band; designed and built the band's website.
- Co-author, with Milan Milosevic, of a method book on clarinet folk ornamentation (in progress).
- Ongoing study of the Turkish language.

Senior Product Designer, UiPath

Bellevue, WA · 2019 to 2023

- Sole designer of an AI assistant for enterprise automation, from first concept to CEO and CTO review and a live demo at the UiPath Forward conference (2023).
- Designed confidence indicators, show-on-demand agent steps and honest labels for experimental AI actions, helping people trust automation they couldn't see.

- Helped build and run a design system that supported more than a dozen products and helped designers at acquired companies reskin their products to fit the suite. Created reusable components, interaction patterns and documentation, following WCAG accessibility guidelines.
- Wrote design principles and guidelines for agents that work alongside people, and shared them with client automation developers.
- Partnered with product managers, engineers and UX research across discovery, research synthesis, interaction design and prototyping; co-ran a week-long design sprint.

Interaction Designer, Bresslergroup

Philadelphia, PA · 2017 to 2018

- Designed digital and physical interactions for medical devices and wearables with industrial designers, researchers and engineers.
- Contributed to projects for clients including Bose and the U.S. Military, balancing usability, safety and technical constraints.

EDUCATION

Master of Human-Computer Interaction, Carnegie Mellon University

2016 to 2017 · Graduate research assistant (co-author)

UX Design Immersive, General Assembly

New York, NY

Bachelor of Music, DePaul University

Applied Generative AI for Digital Transformation, MIT Professional Education

2024

SKILLS

Research: contextual inquiry, journey mapping, personas, service blueprinting, heuristic evaluation, usability testing, stakeholder facilitation.

Design: interaction and UI design, design systems, accessibility (WCAG), wireframing, prototyping, Figma, Sketch, Adobe Creative Suite.

Code and AI: HTML, CSS, JavaScript, React, Angular, Python; building with AI coding tools such as Claude Code; Whisper and GPT APIs.
